

Orange Romania × The Campaign Registry

A pilot to recover lost A2P revenue, reduce SMS fraud, and establish a national standard for sender verification and trust.

01 What TCR builds with Orange Romania

Orange runs a national A2P sender & campaign registry. TCR supplies the **identity and verification platform**, stays completely out of the message path; Orange supplies the market leverage to make senders register and comply.

Senders declare

Brands & aggregators register, proving sender ID and use case.

Orange gains visibility

TCR enriches registry with real-time sender scoring & DNSC signals.

Orange controls delivery

Verified senders get priority. Unregistered traffic gated.

ORANGE BENEFITS

- **Recover gray-route A2P revenue** — convert unbilled to billed traffic
- **Reduce fraud & spam** — DNSC linkage, sender transparency
- **New VAS tier** — premium verified-sender delivery

TECHNICAL NEXT STEPS

Technical discovery → **Pilot scope** → **Integration** → **ANCOM alignment**

Co-own with Vodafone, Digi, Telekom for market-wide standard.

02 From solution design to go-live — I own that path

20 years running operator **enterprise architecture and delivery programmes** — from techno-functional workshops through to live service. I bridge Orange's business objectives with TCR's technical platform.

Drive technical workshops

Map Orange's firewall, A2P flows, integration points. Define pilot scope.

Define pilot scope

30/60/90 roadmap. Success metrics. Reseller & brand onboarding.

Deliver to go-live

Integration, UAT, cutover, ops runbook, live monitoring.

Orange business ↔ TCR technical

I speak both languages — operator P&L and systems delivery — ensuring alignment and execution.

North American operator deployed this in 2025.

3M subscribers · TCR registry deployed · A2P revenue recovered · Playbook for scale
